SUMMARY FILE 4

Summary File 4 (SF4) contains the sample data, which is the information compiled from the questions asked of a sample of all people and housing units.

The sample data are presented in 213 population tables (matrices) and 110 housing tables, identified with "PCT" and "HCT", respectively. Each table is iterated for 336 population groups: the total population, 132 race groups, 78 American Indian and Alaska Native tribe categories (reflecting 39 individual tribes), 39 Hispanic or Latino groups, and 86 ancestry groups.

SF 4 is released as individual files for each of the 50 states, the District of Columbia, and Puerto Rico; and for the United States. The tables (matrices) are identical for all files, but the geographic coverage differs. Data are provided down to the census tract level.

1% PUBLIC USE MICRODATA SAMPLES (PUMS) FILE

PUMS files have state-level Census 2000 data containing individual records of the characteristics for a 1 percent sample of people and housing units.

The PUMS files contain geographic units called super-Public Use Microdata Areas (super-PUMAs), a new geographic entity for Census 2000. The state files, which may contain one or more super-PUMAs, include geographic equivalency files that show the relationship between the super-PUMA and standard Census 2000 geographic concepts (e.g., counties, etc.). The super-PUMAs are made up of a Public Use Microdata Area (PUMA) or group of contiguous PUMAs (each PUMA must have a minimum of 100,000 population). PUMAs are only identified on the 5-percent files and not on the 1-percent files.

ATTACHMENT TWO

SB 1209 – Population Estimates

BACKGROUND

The voters of Arizona have passed a series of ballot initiatives over the years that provide a portion of state collected revenues to local governments for the provision of local services. This portion of the state income tax is known as state shared revenues. Currently, approximately \$1 billion in state shared revenue is distributed each year to cities and towns based upon their share of the population in the state.

THE ISSUE

Current state law provides for the distribution of state-shared revenues on the basis of the latest decennial census or a mid-decade Special Census. In 1994 State law was amended to allow for the use of a survey or a Department of Economic Security (DES) estimate to derive a population figure for distributing state shared revenue in lieu of a mid-decade census. Cities with a population of more than 50,000 were required to have a survey conducted, while everyone else could use the 1995 DES approved population estimates. This was prompted in part by the desire to have a less costly method of deriving population than by undertaking a full Special Census. The 1994 Session Law allowing for these alternatives to conducting a Special Census expired in June of 2001.

Because some cities in Arizona are growing very rapidly, given the current law in place, they would probably pursue conducting a full Special Census because the additional state share revenue generated would exceed their cost for a Special Census. Larger cities that are not growing as rapidly, and therefore would lose a percentage of state shared revenue, might not want to pursue an expensive Special Census. So, a mutually beneficial approach is desired.

Given the increasing costs of conducting a Special Census (estimated to be \$30 million for all the jurisdictions within Maricopa County), and the declining revenues within municipal governments, there is a desire to amend the law again to allow for less costly alternatives to a Special Census such as a Census survey, or a DES derived estimate.

Additionally, if all the jurisdictions within Maricopa County jointly agree to conduct a Census survey, the Federal Highway Administration would allow the region to use highway funds to defray 50% of the cost of a Census survey up to a maximum of \$6 million. In closing, as the state and municipalities are looking to be responsive to budget shortfalls, a change to state law to allow for more alternatives to obtain population estimates is requested.
